

How TO SAVE OUR EARTH FROM

GLOBAL WARMING

1. Automobiles stay ahead of everything in the emission of carbon, so as far as possible try to avoid using your automobiles for short distances.
2. Instead of everybody using their own vehicle if some of you are working in the same class area and living in the same area you can share one vehicle.
3. Now everything can be done through net instead of going to the banks, stations, markets and etc you can do the same by sitting at your home in front of your system.
4. You can reduce the usage of your refrigerator, if you think that how much my refrigerator is going stand as a cause, don't see as one refrigerator of your home count the number of refrigerators around the world in each home and shops, hotels etc.
5. Start using the recycle base articles, change from plastic to paper.
6. We can change ourselves to use cotton cloths than silk rayon cloths.
7. As much as possible use cotton bags or paper bags than plastic bags.
8. Instead of searching for a solution how to destroy the used batteries, start using rechargeable batteries.
